Identity Management

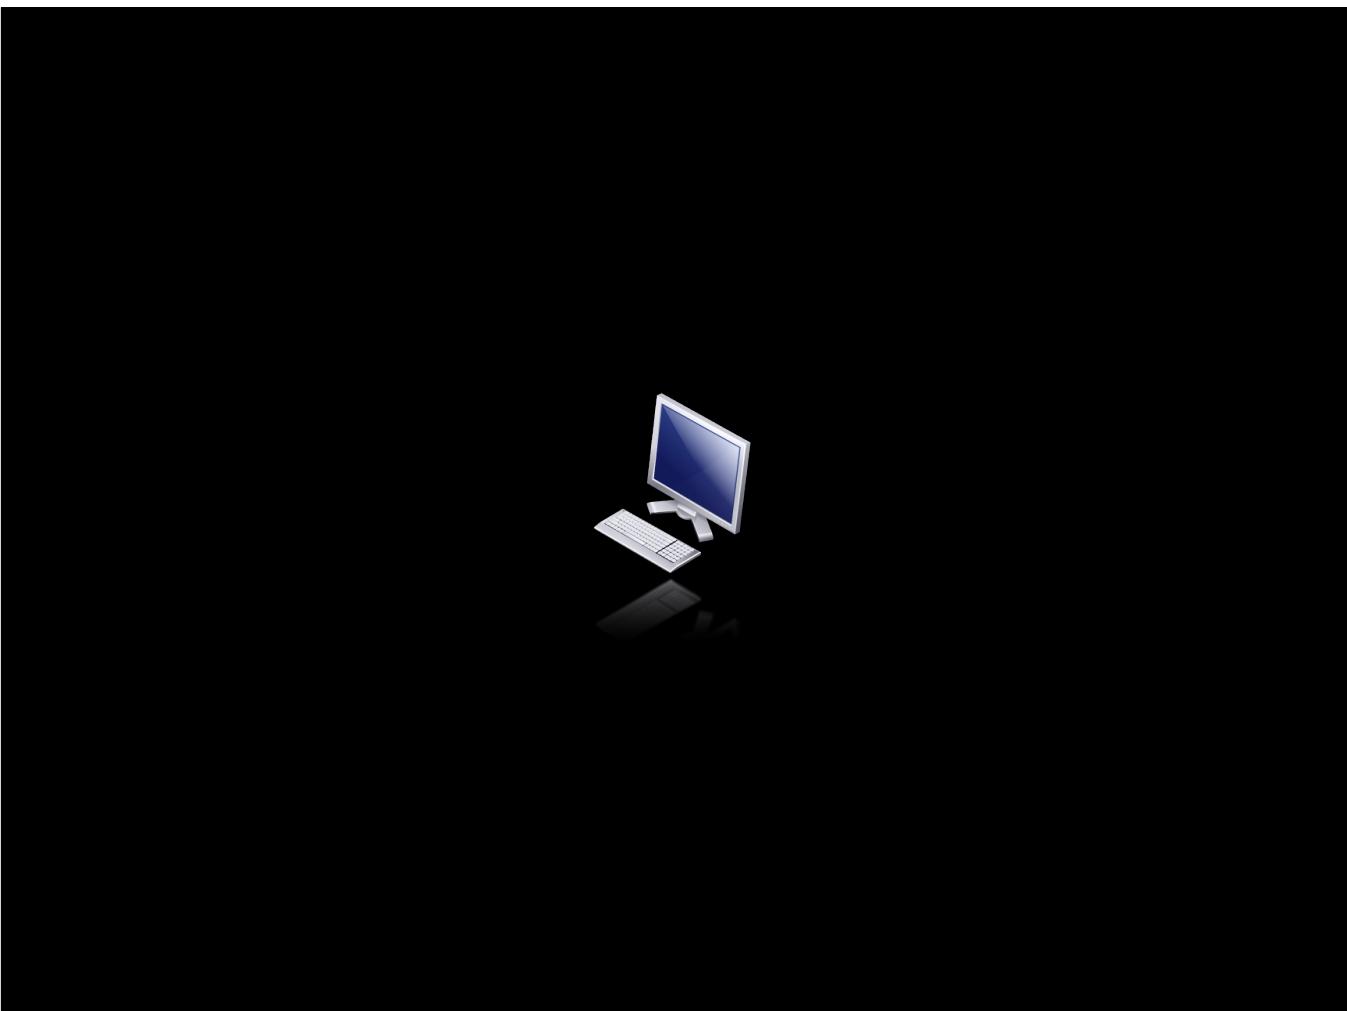

Mike Wiesner

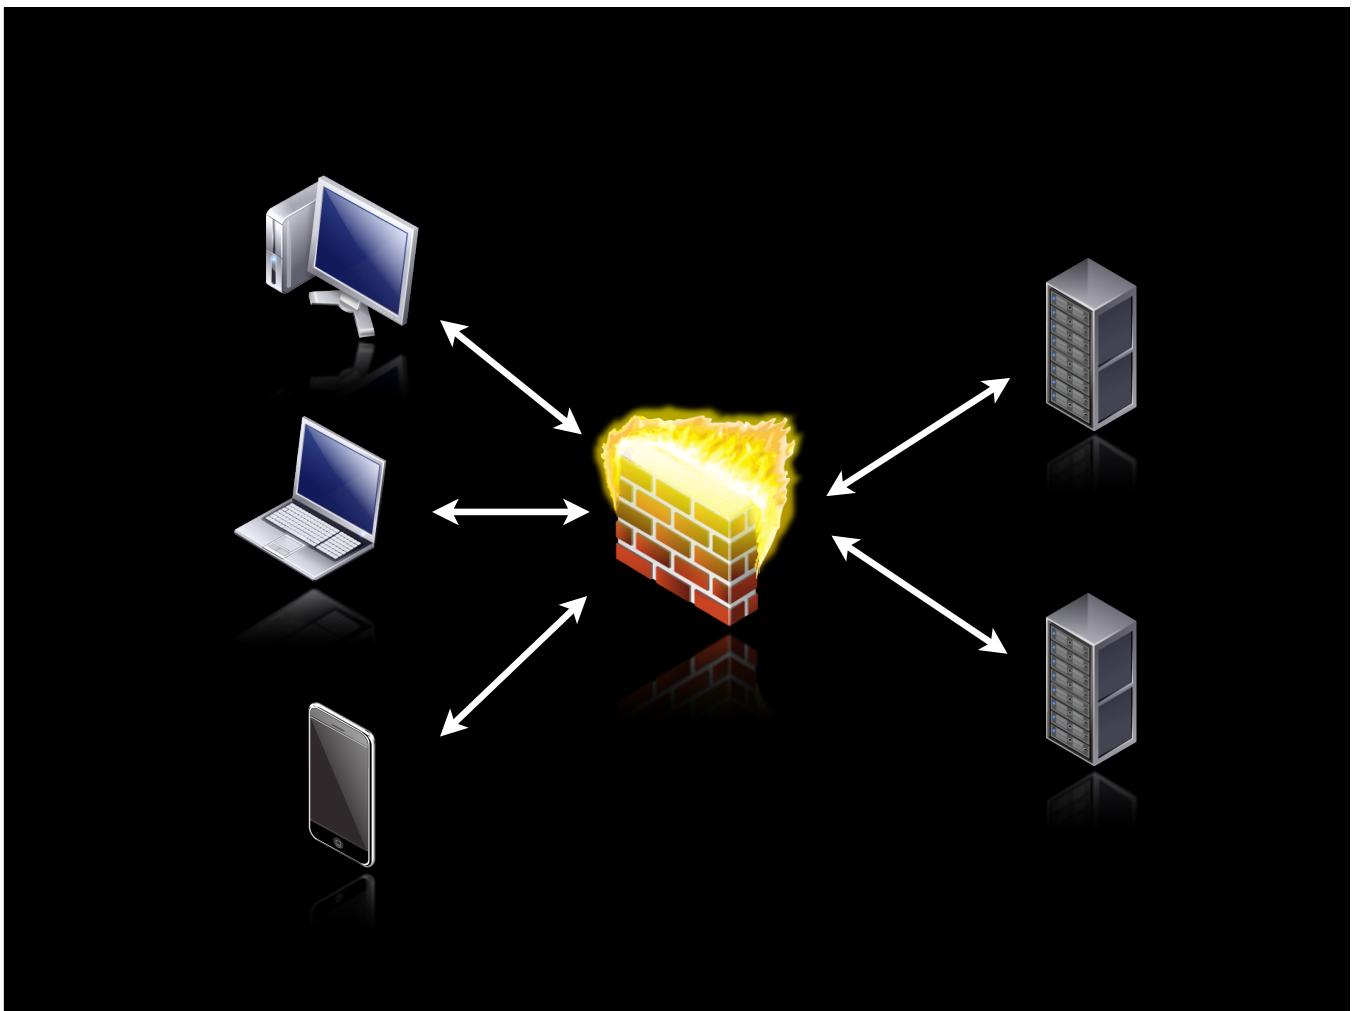

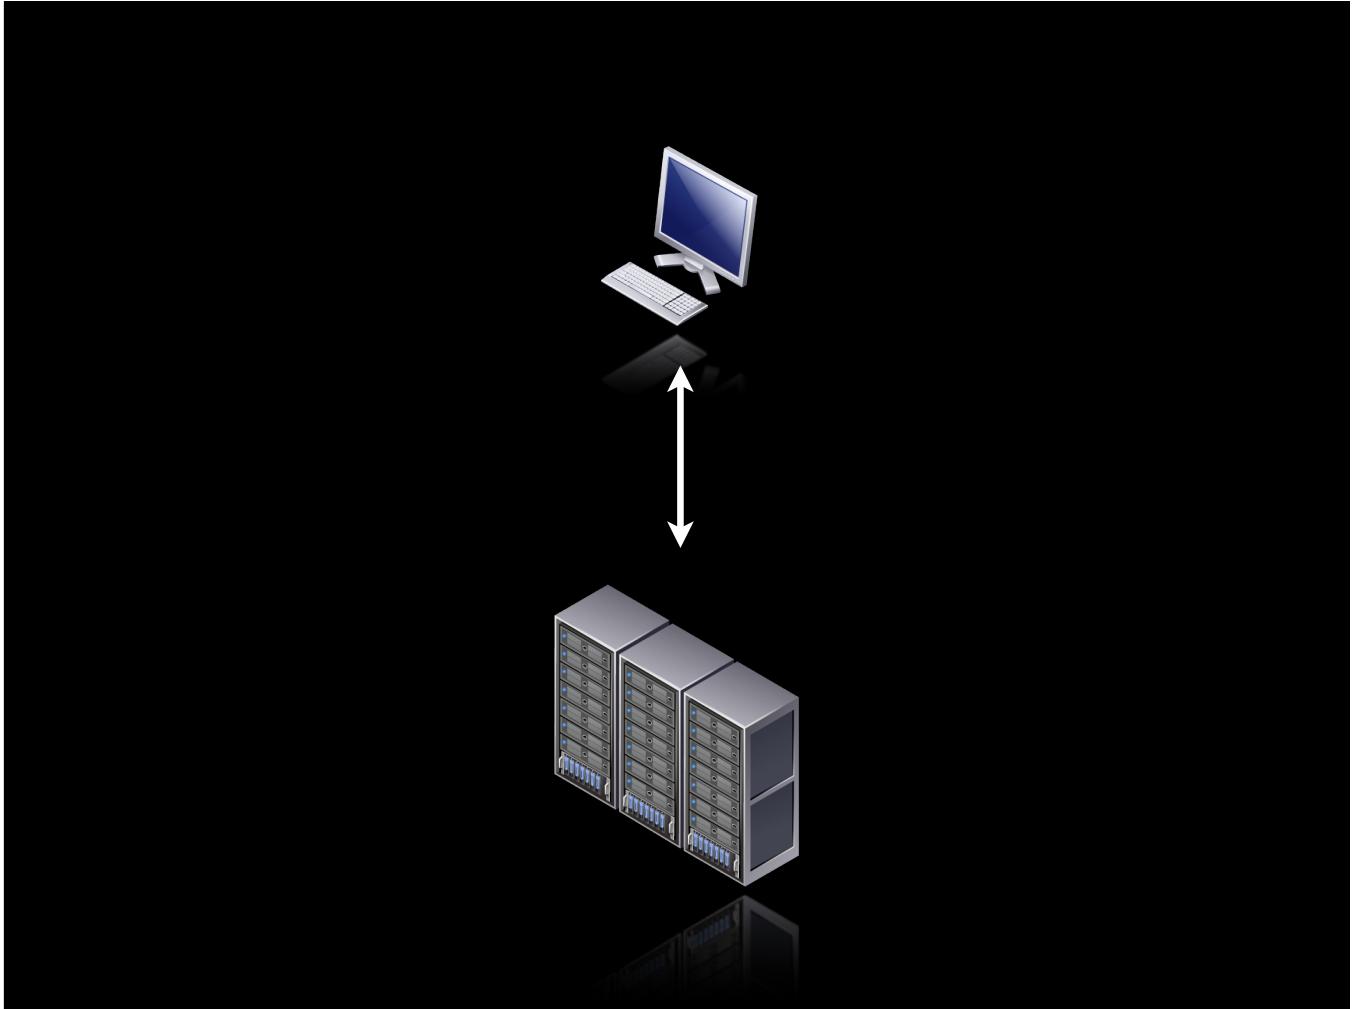

- Senior Consultant SpringSource Germany
- Fokus
 - Sicherheit
 - Integrationen
 - Prozesse
- Entwicklung
 - Spring Security
 - Spring Security Kerberos Extension

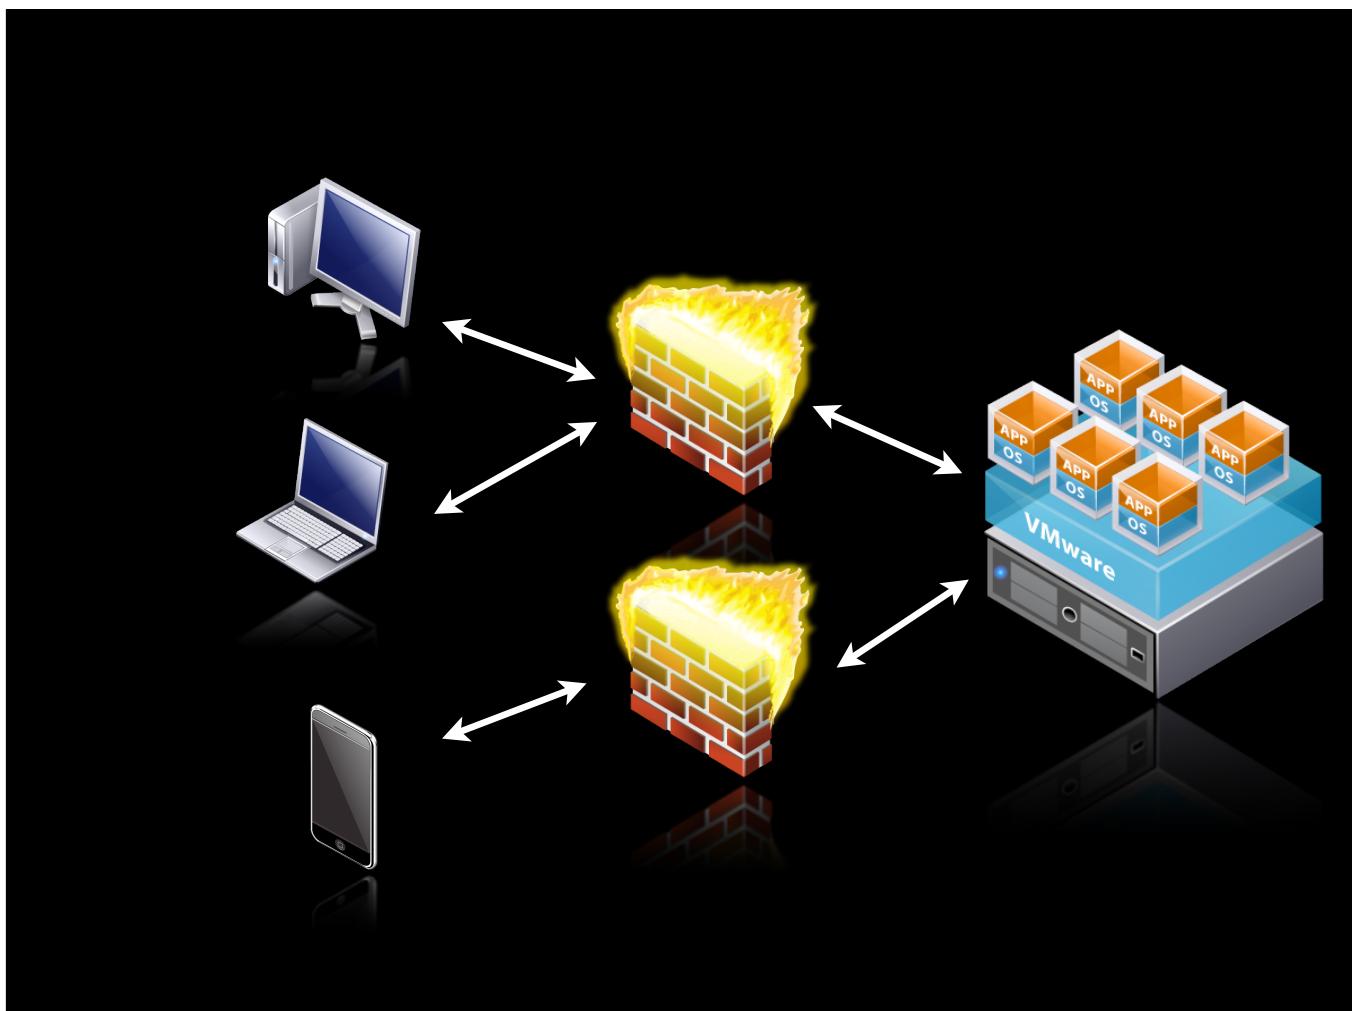

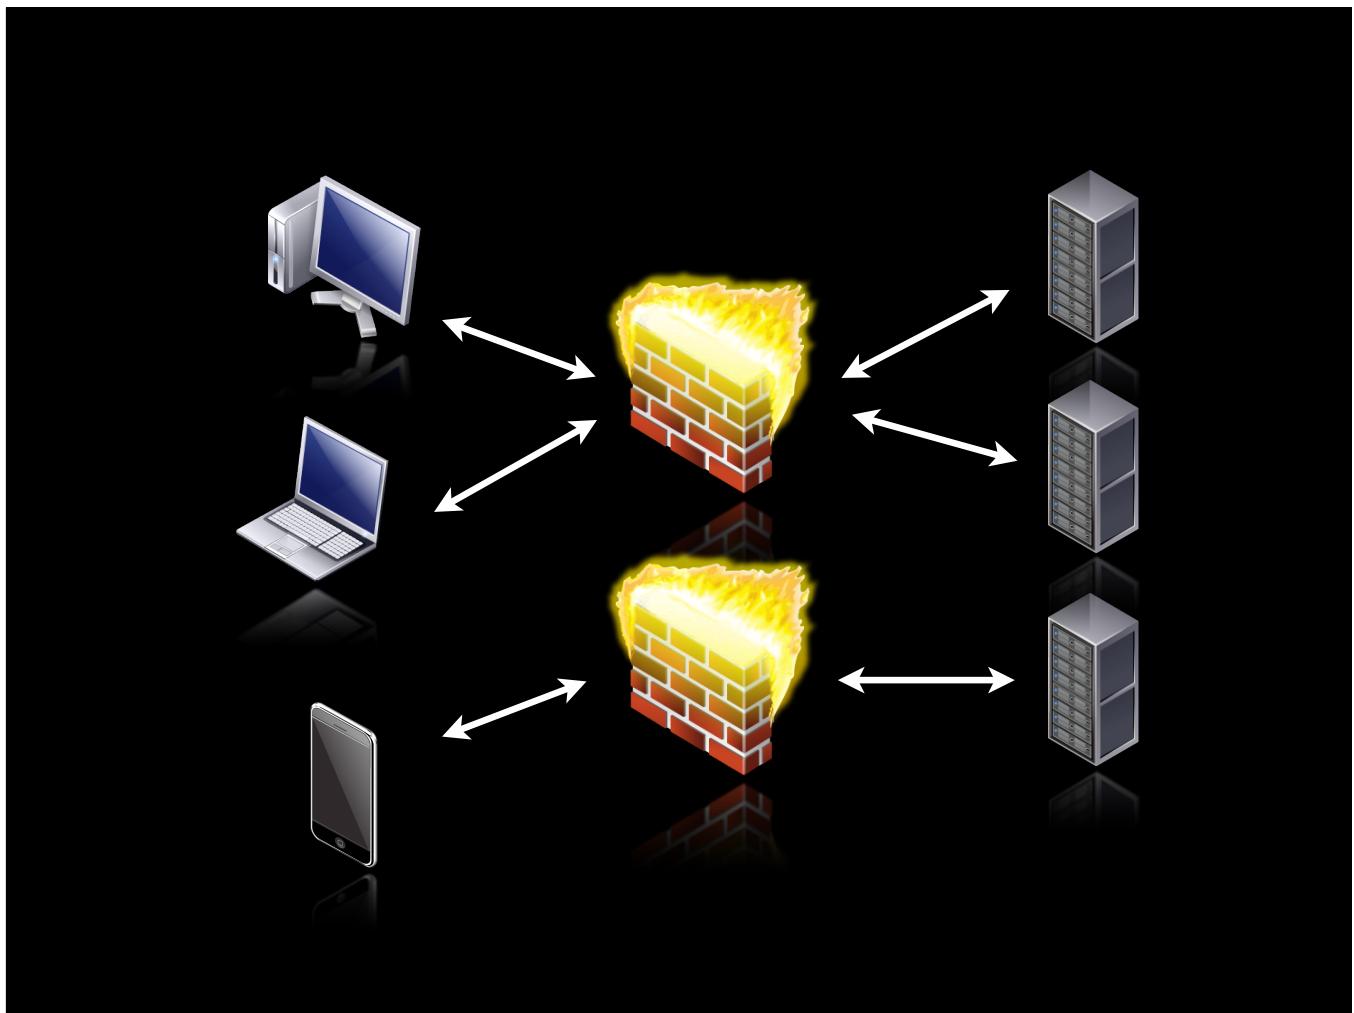

A black silhouette of a man pushing another man off a cliff against a cloudy sky. A yellow sticky note pinned to the top right corner contains the text "Wem vertraue ich?".

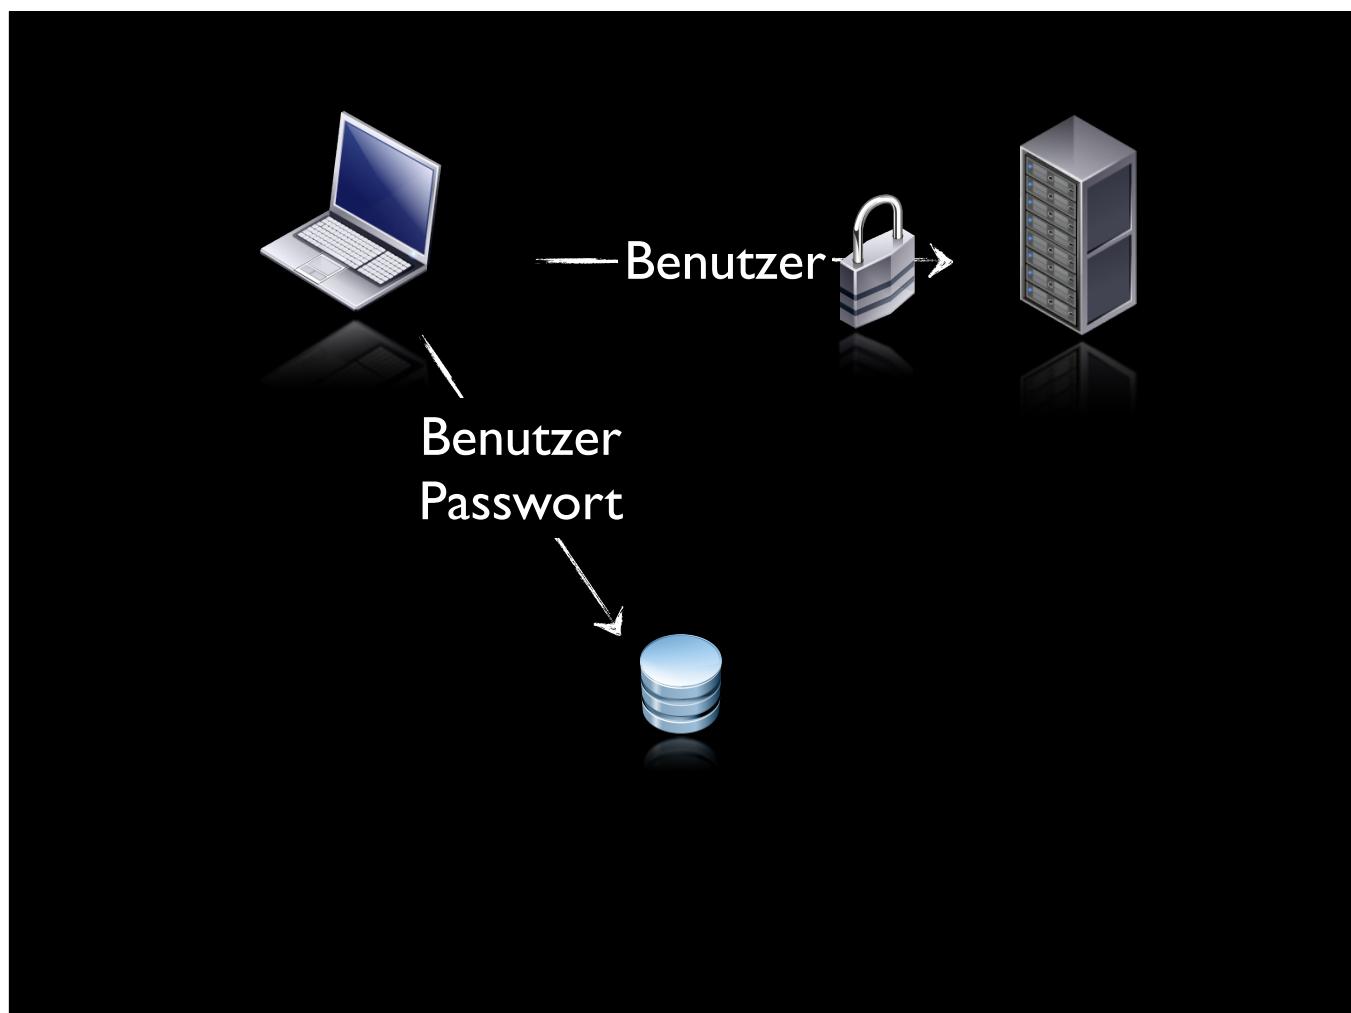

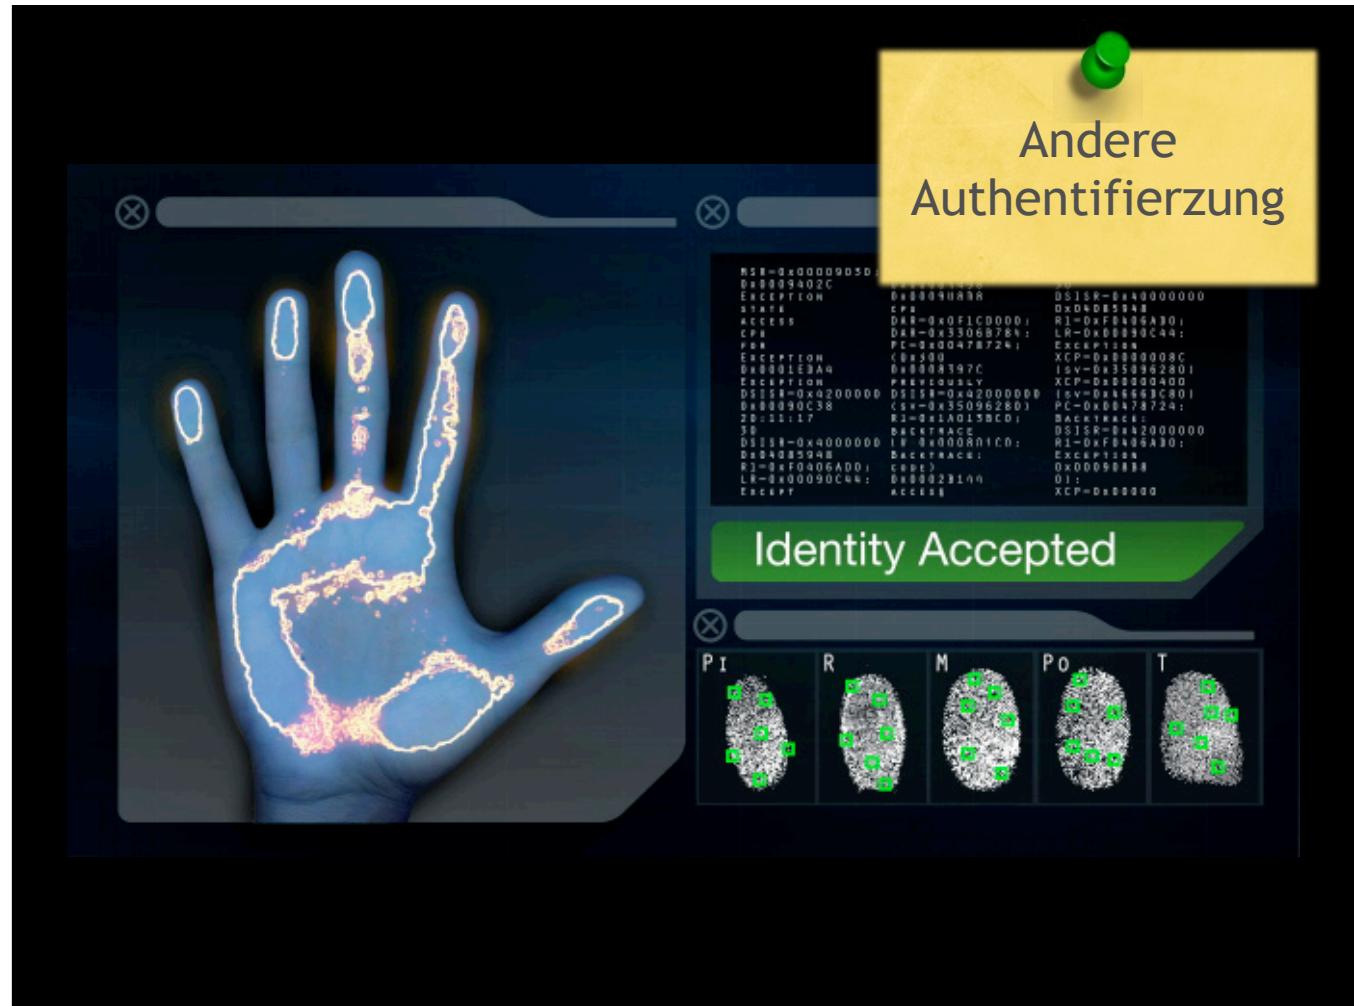

Wem vertraue
ich?

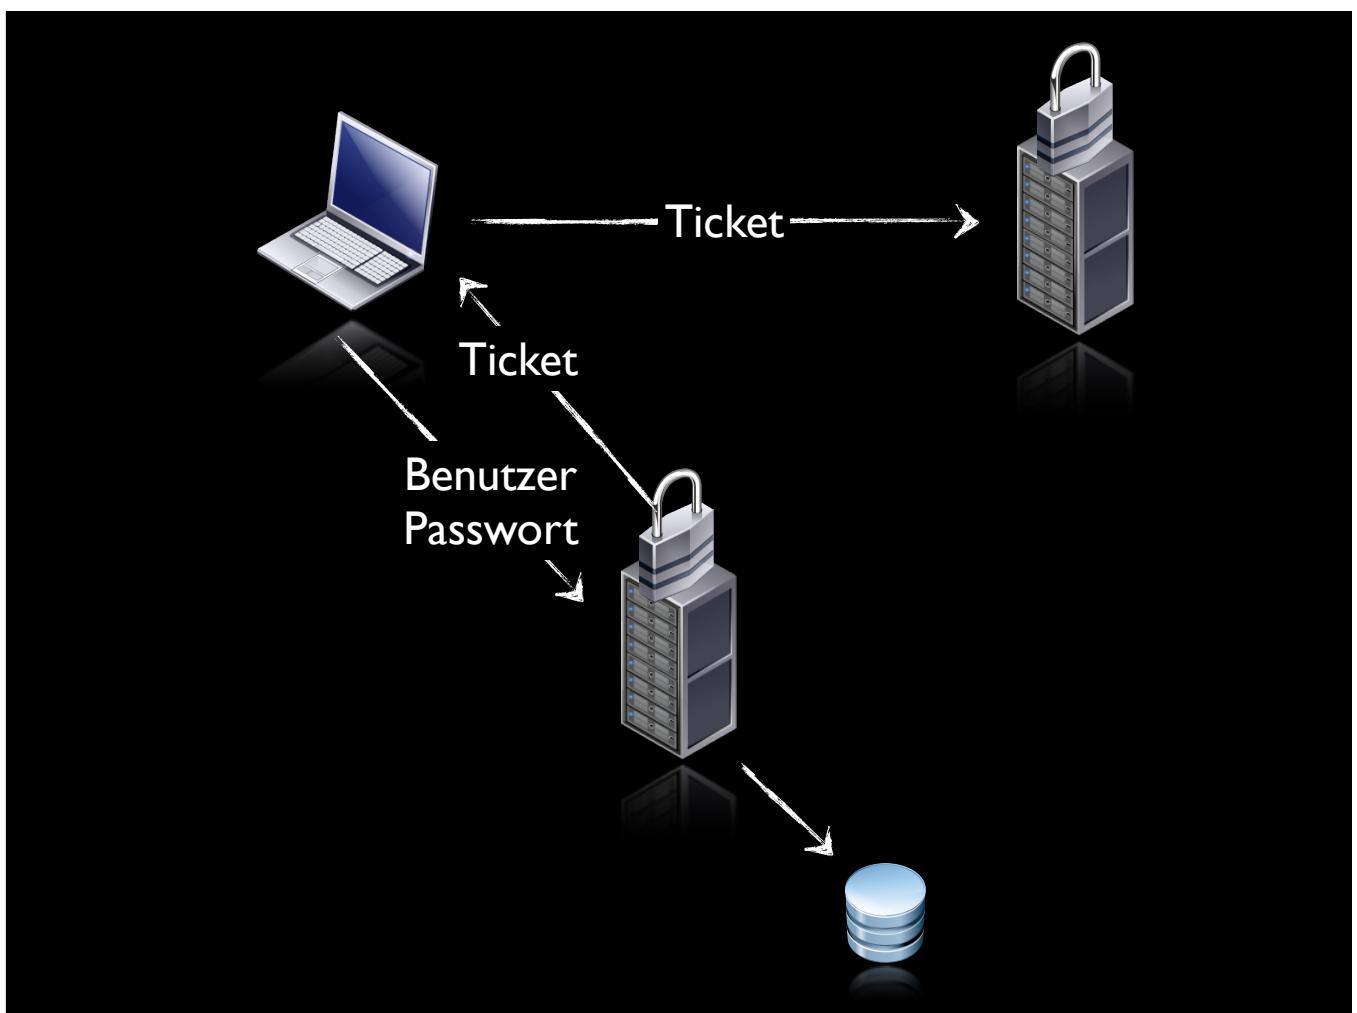

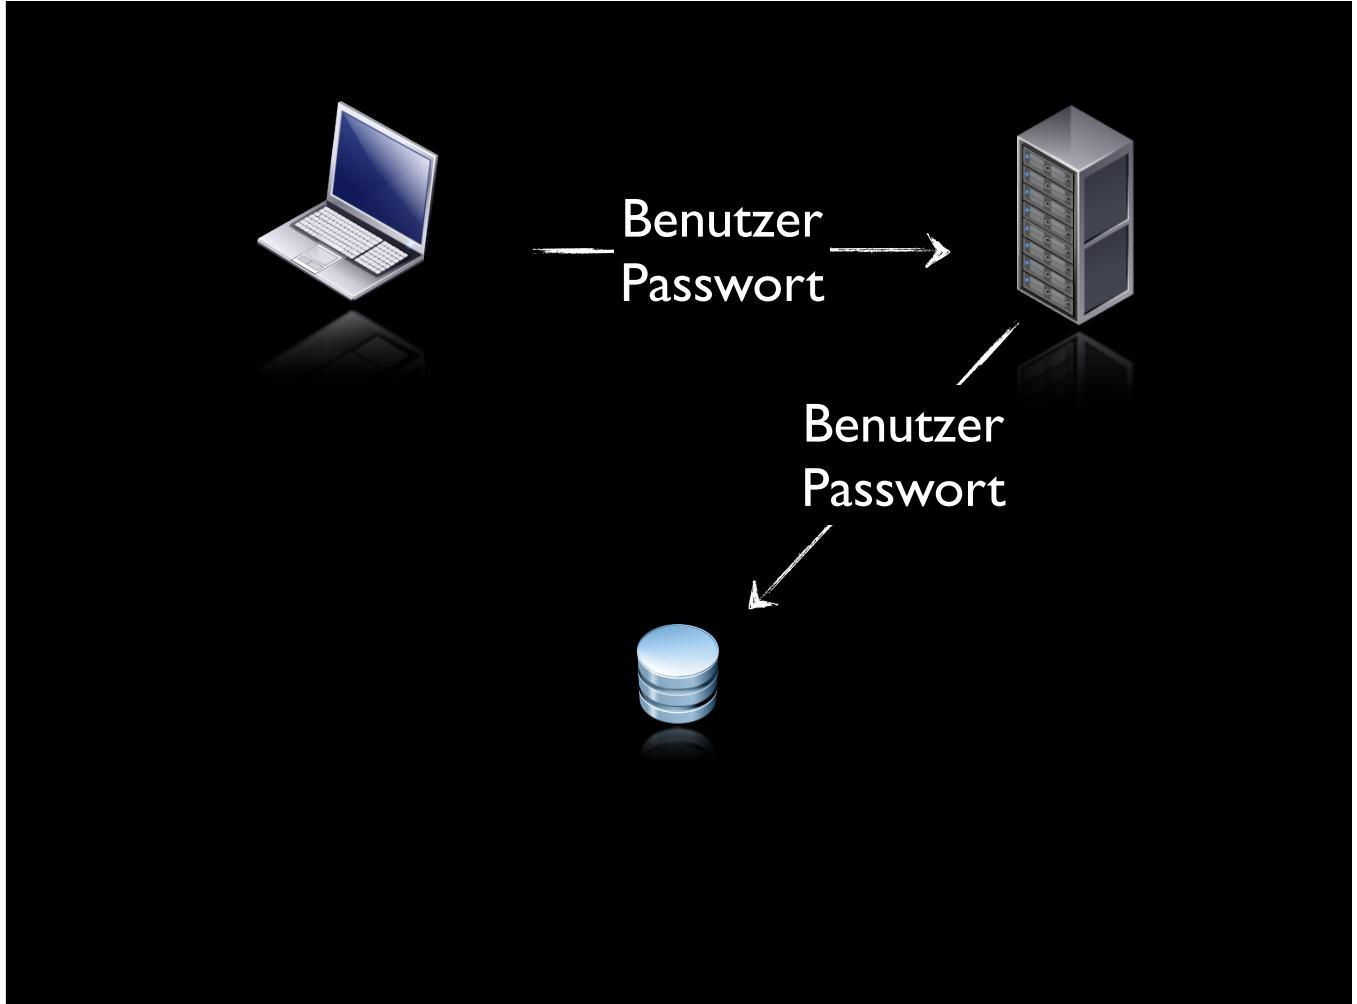

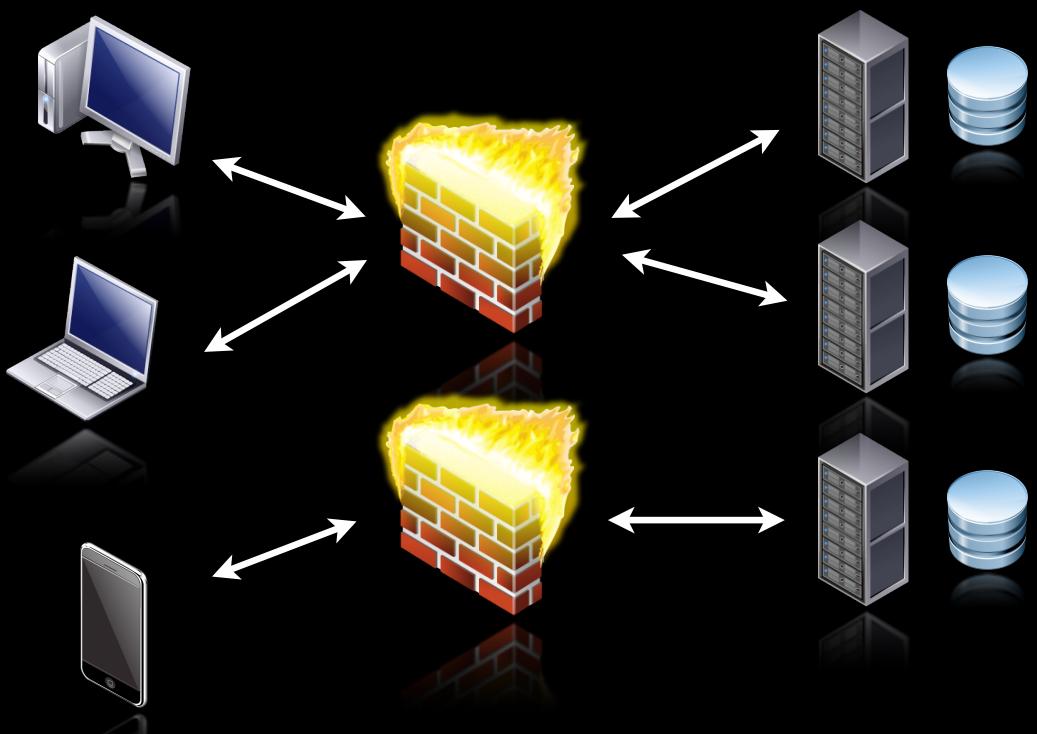

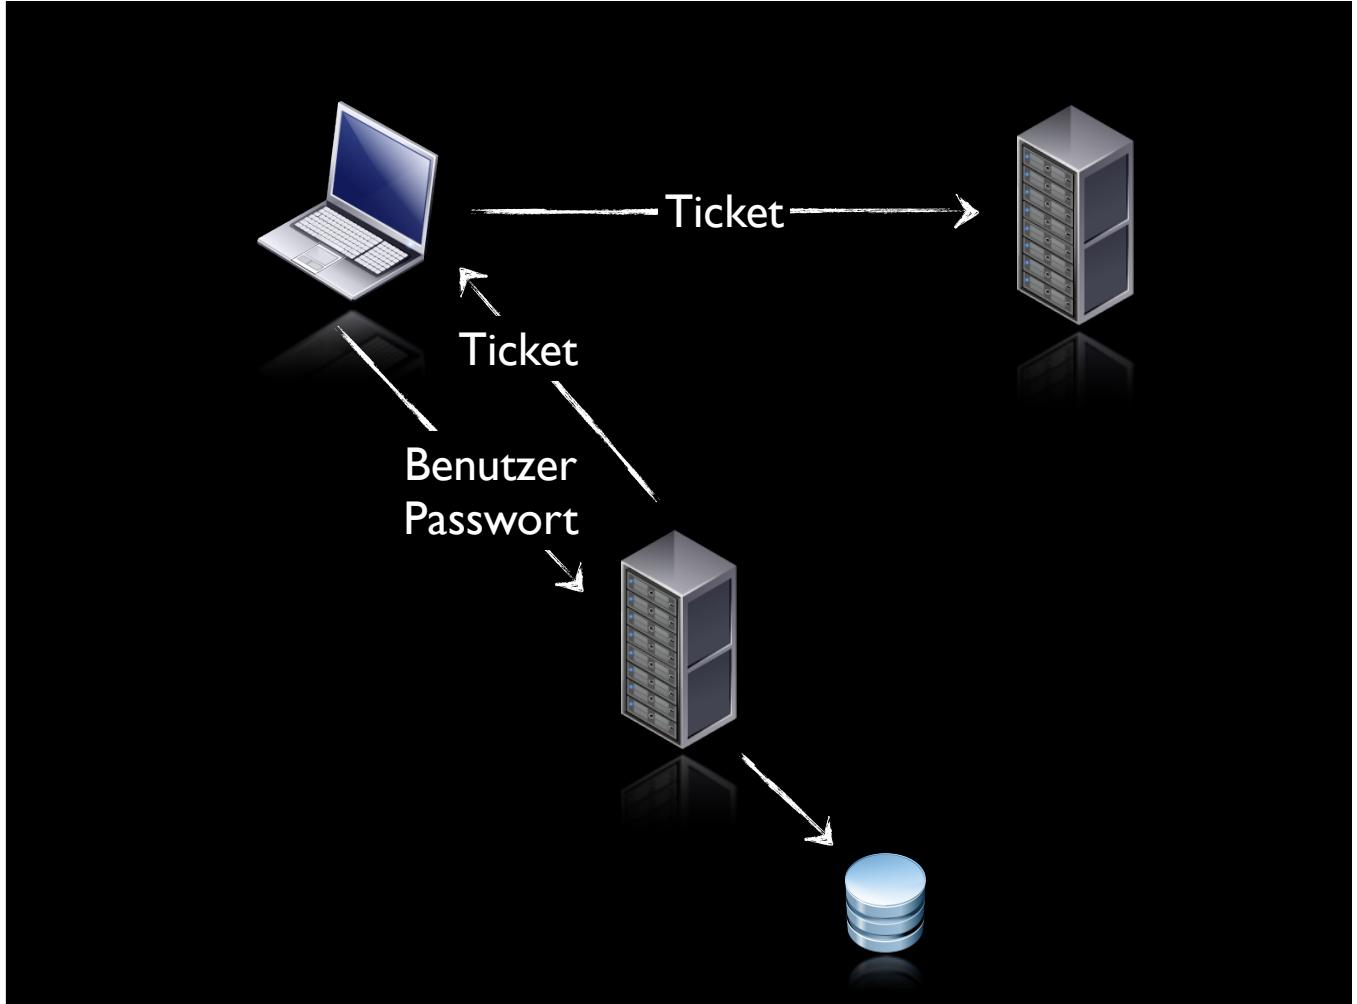

Ist das sicher?

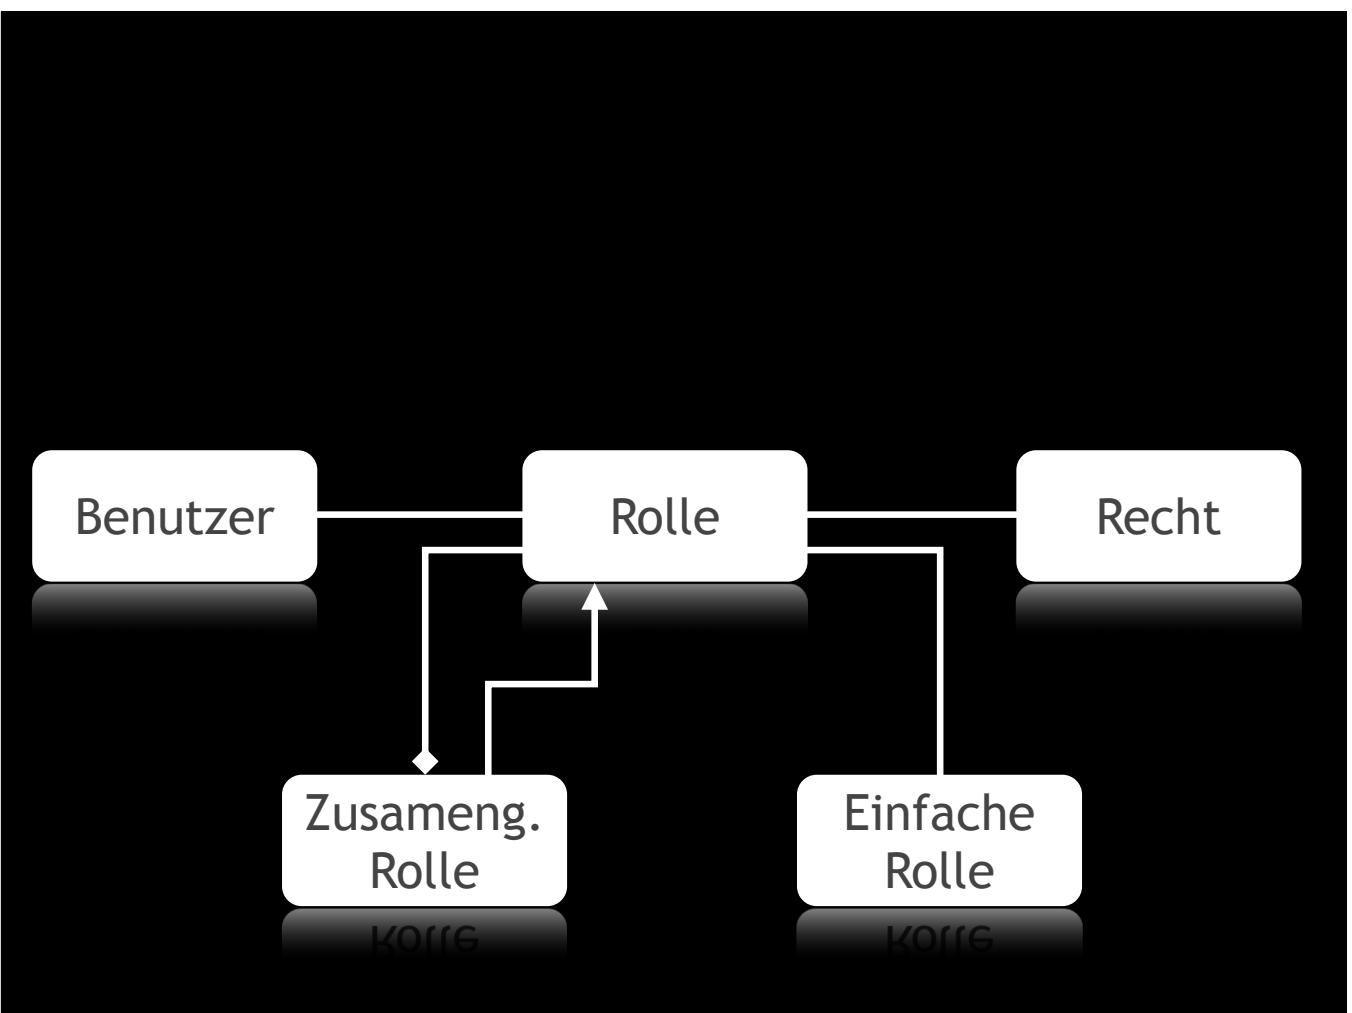

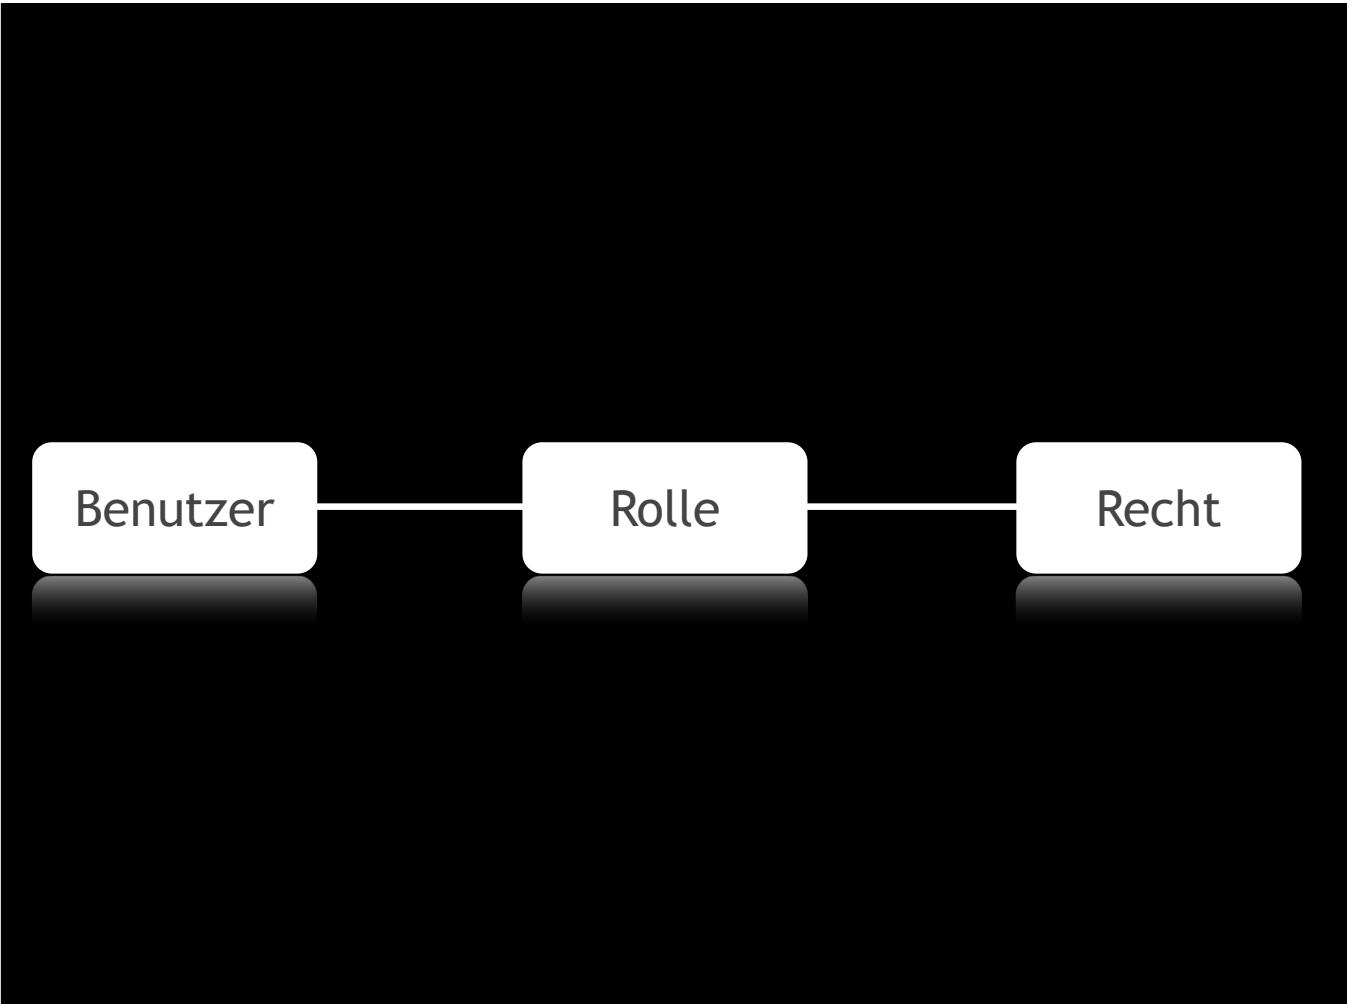

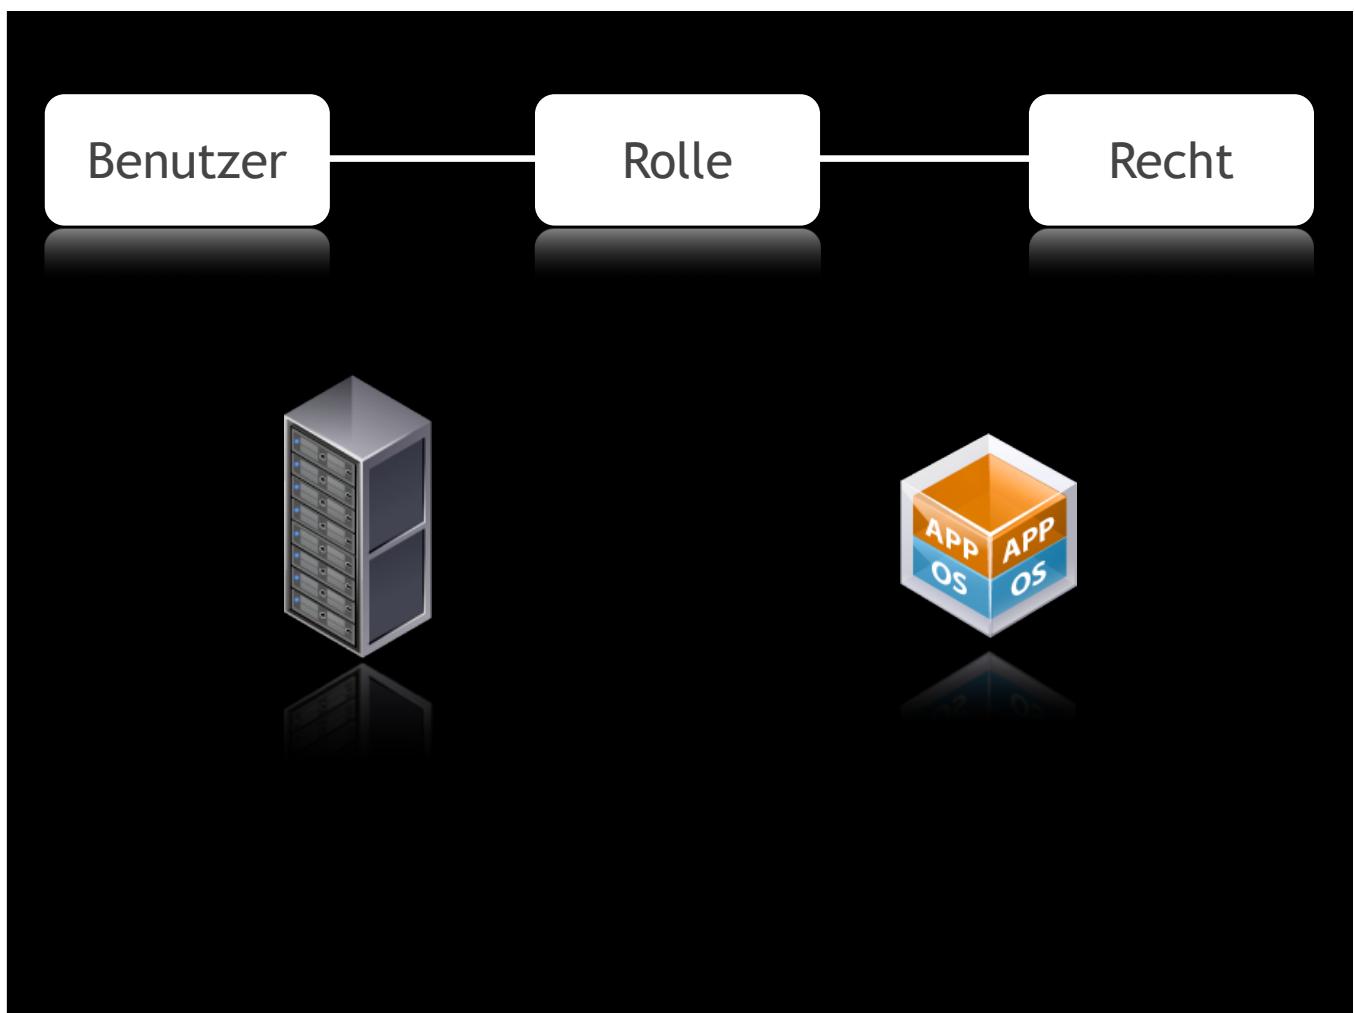

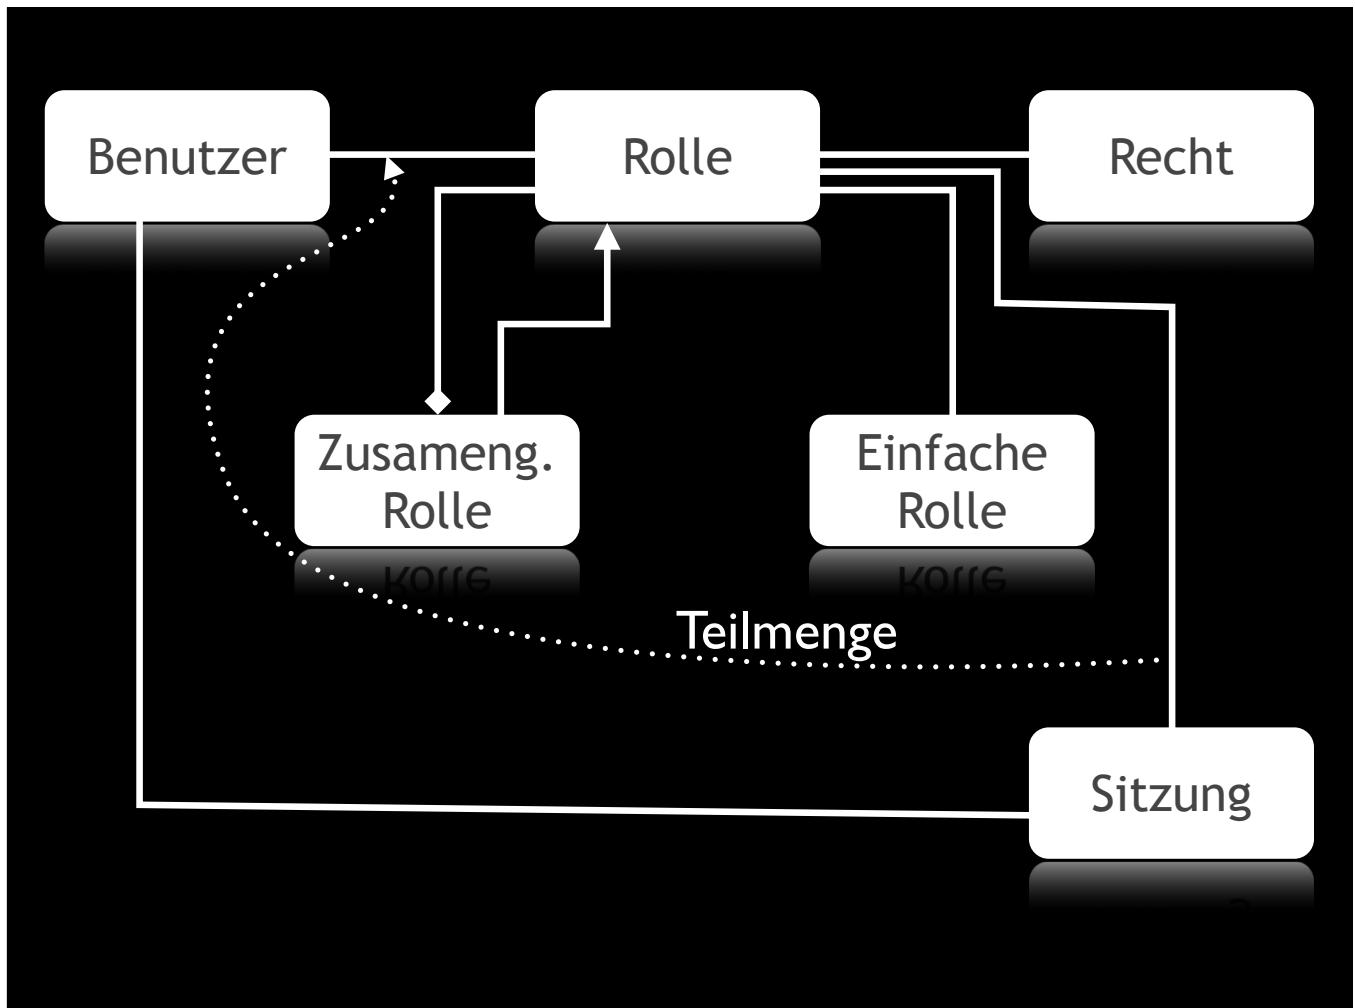

Rollenbasierter Zugriff

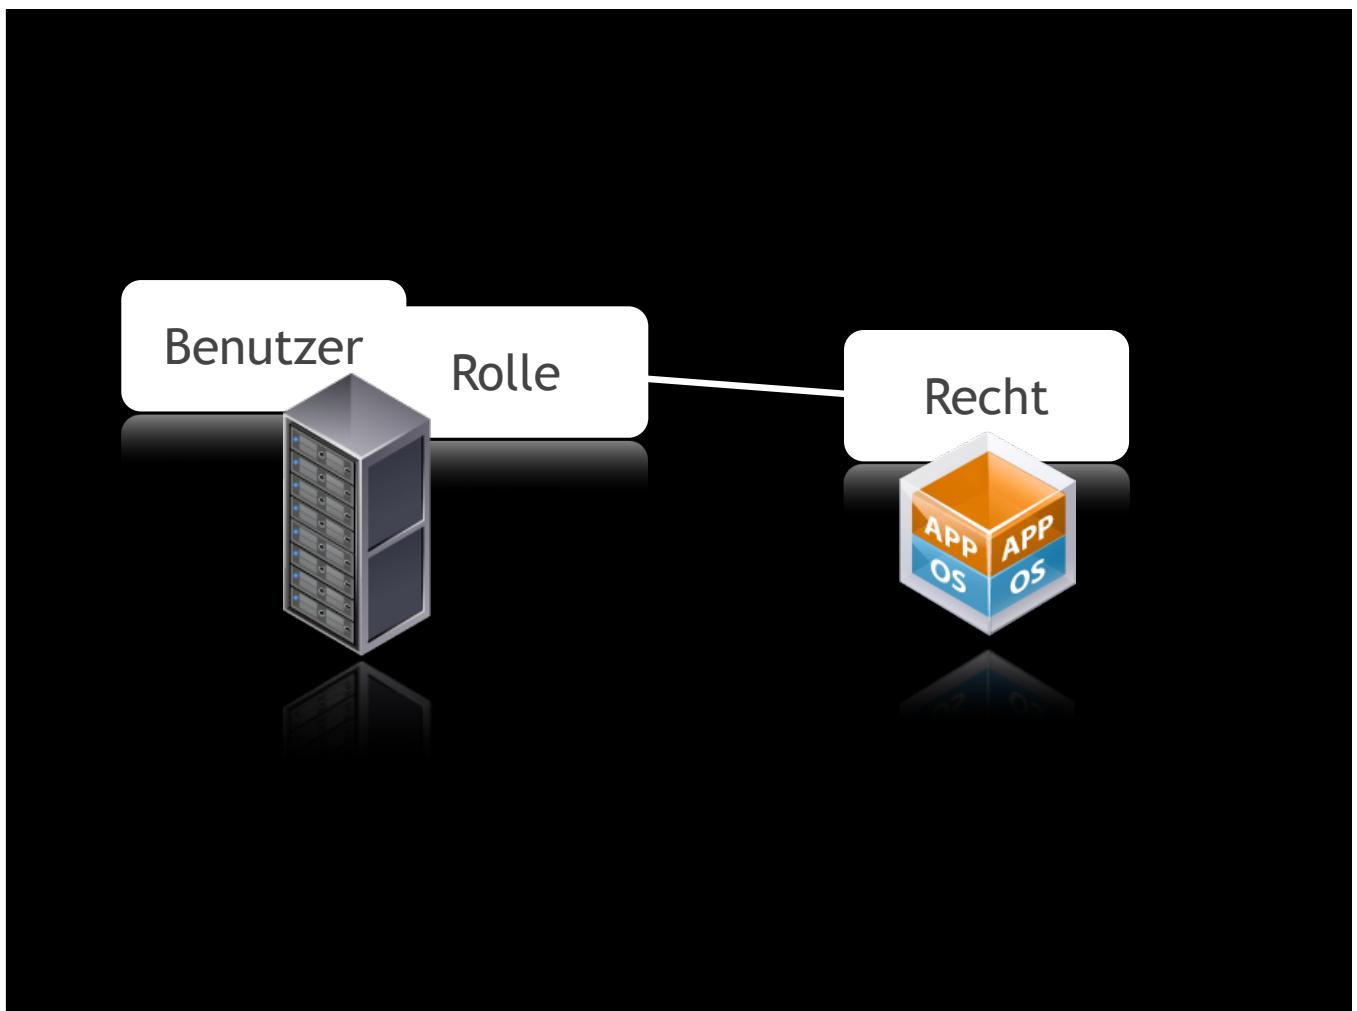

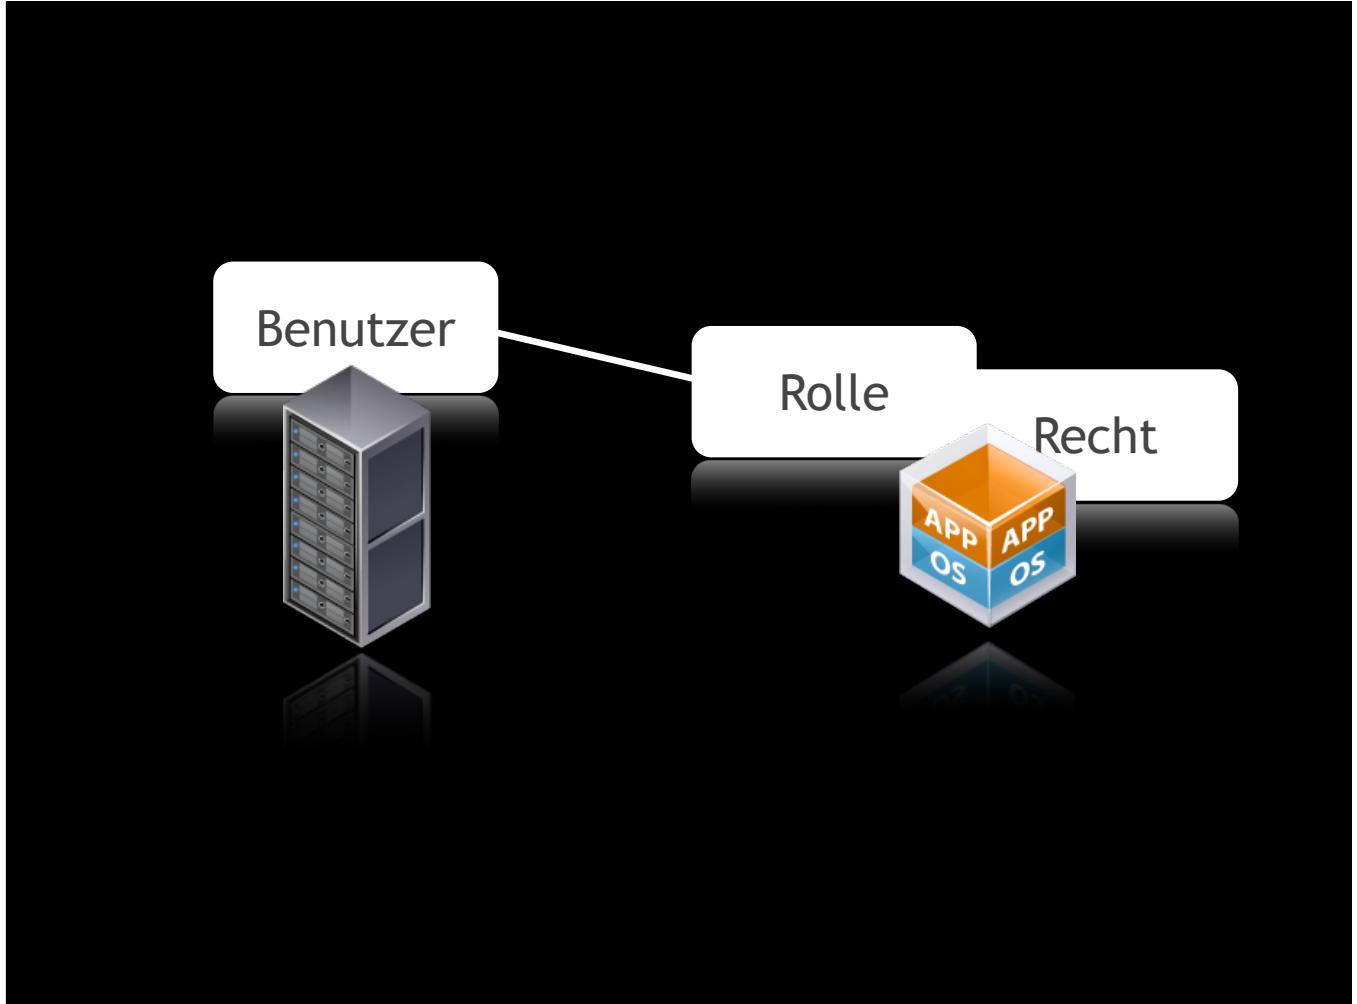

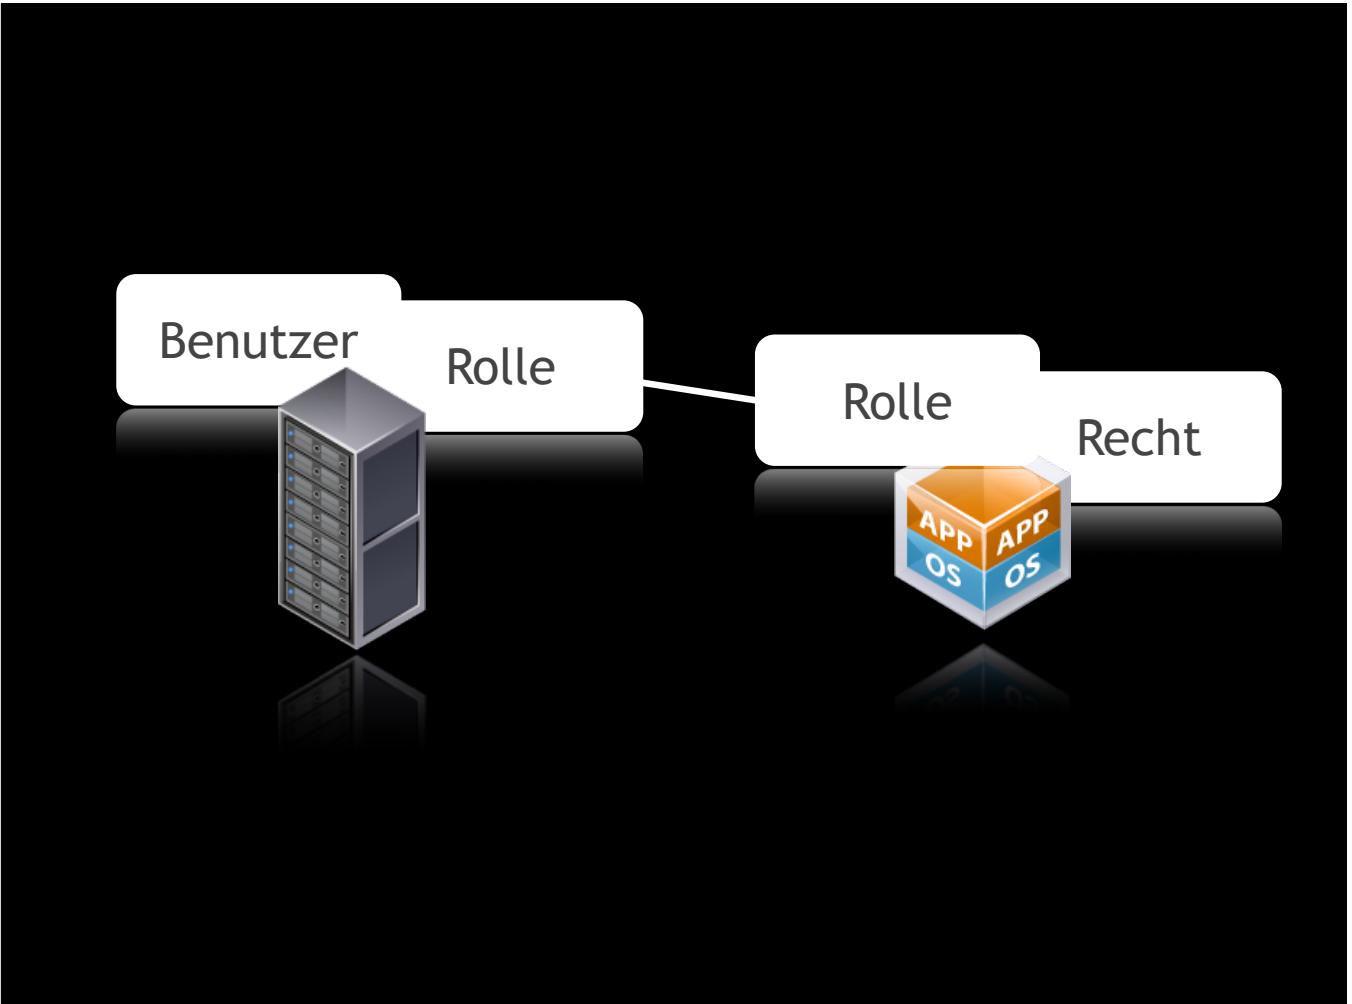

Benutzer

Rolle

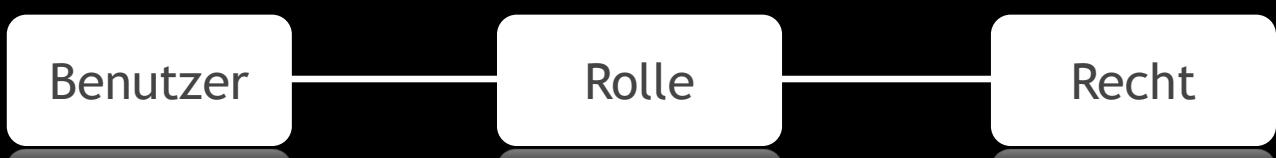

SOA?

Rechteprüfung?

```
@Secured("ROLE_ADMIN")
public void deleteUser(User user)
```

```
@Secured("PERM_DELETE_USER")
public void deleteUser(User user)
```

FAZIT

FAZIT

- Identity Management ist mehr als SSO
- SSO hat nichts mit Rollen/Rechten zu tun
- Rollen sind mehr als nur Benutzergruppen
- Rollen sollten zentral verwaltet werden
- Rollen sollten nicht im Code verwendet werden
